ENDODONTIC CONSENT AND INFORMATION FORM

We would like our patients to be informed about the various procedures involved in endodontic therapy and have their consent before starting treatment. Endodontic (root canal) therapy is performed in order to save a tooth which otherwise might need to be removed. This is accomplished by conservative root canal therapy, or when needed, endodontic surgery. The following discusses possible risks that may occur from endodontic treatment, and other treatment choices.

RISKS: The risks include the possibility of instruments broken within the root canals, perforations (extra openings) of the crown or root of the tooth, damage to bridges or crowns, damage to existing fillings or porcelain veneers, loss of tooth structure in gaining access to canals, and cracked teeth. During treatment, complications may be discovered which make treatment impossible, or which may require dental surgery. These complications may include: blocked canals due to fillings or prior treatment, natural calcifications, broken instrument, curved roots, periodontal disease (gum disease), or splits or fractures of the teeth. Temporary or permanent numbness of teeth, lip, gums, chin and cheek may occur as a result of the administration of anesthetic solution.

MEDICATIONS: Prescribed medications and drugs may cause drowsiness and lack of awareness and coordination (which may be influenced by the use of alcohol, tranquilizers, sedatives or other drugs). It is not advisable to operate any vehicle or hazardous device until recovered from their effects.

OTHER TREATMENT CHOICES: These include no treatment (waiting for more definite development of symptoms) or tooth extraction. Risks involved in these choices might include pain, infection, swelling, loss of teeth, and infection to other areas.

CONSENT: I, the undersigned, being the patient (parent or guardian of minor child) consent to the performing of procedures decided upon to be necessary or advisable in the opinion of the doctor. I also understand that upon completion of root canal therapy in this office I shall return to my general family dentist for a permanent restoration of the tooth involved, such as a crown, cap, onlay, or filling.

I understand that root canal treatment is an attempt to save a tooth which may otherwise require extraction. Although root canal therapy has a high degree of success, it cannot be guaranteed. Occasionally a tooth which has had root canal therapy may require retreatment, surgery, or even extraction.
